Profile

I am a Full Stack Developer specializing in MERN and PHP Laravel, focused on building secure, scalable, and high performance web applications. I have strong experience developing RESTful APIs, authentication systems, and database driven applications using React, Node.js, Express, MongoDB, PHP, and Laravel.

I enjoy writing clean, maintainable code and building real world products that solve business problems. I have built full stack platforms including e-commerce systems, crypto investment dashboards, and logistics/courier applications.

I am actively open to full time opportunities and collaborations.

Education

01/2023 – 04/2023 Online / Remote	**Advanced MERN Stack Development Professional Certificate** Udemy Deep dive into advanced state management using Redux Toolkit and Zustand. Focused on API security, best practices for database modeling, and scalable deployment strategies.
05/2022 – 12/2022 Online / Remote	**Full-Stack Web Development Certification** freeCodeCamp (FCC) Focused on practical application of React, Node.js, and MongoDB to solve real-world problems. Completed advanced projects in API design and client-server architecture.
09/2008 – 06/2014 Benin city, Edo State, Nigeria	**Senior Secondary School Certificate (WAEC)** United Faith Academy Secondary School

Professional Experience

01/2024 – 03/2024 Remote	**Logistics Tracking Application** Full Stack Developer / Geolocation & UI Implementation Engineered a MERN stack logistics application with role-based access for Client, Driver, and Admin users, handling security via access control. Integrated React Leaflet and Google Maps tiles to enable real-time package tracking and dynamic route calculation for over 50+ simulated shipments. Developed a professional, highly optimized UI using Plain CSS and modular React components for a responsive, clean design. Code Repository: [https://github.com/SegundamanoDev/luckyBash , https://github.com/SegundamanoDev/luckyBash-backend]
07/2025 – 09/2025 Remote/personal portfolio	**Educational Investment Simulator (MERN)** Full Stack Transactional System Developer Developed and secured a MERN application simulating investment plans, managing over 300 unique transaction entries and user withdrawals in MongoDB.

Integrated external financial APIs (CoinMarketCap, TradingView) to pull real-time crypto data, ensuring accurate market simulations for investment performance. Implemented robust validation and custom JWT authentication to secure user accounts and prevent simulated negative balance.
